Books

From Big Bang to Robot Everything Has a Beginning Marc ter Horst & Eliane Gerrits (ill.)

- *Accessible non-fiction book about the origins of all kinds of things*
- *No less than 38 beginnings, such as the universe, language ... and you!*
 - *Perfect for inquisitive kids*

Where does language come from? How was the first robot invented? Who came up with clothing? Children want to know everything and at times they embarrass their parents with their relentless questions. Featuring one 'beginning' per double-page spread, *From Big Bang to Robot* is the perfect book for children with a healthy thirst for knowledge: lots of wonderful information about lots of wonderful topics.

Marc ter Horst, who has proven with his successful *Hé aarbewoner!* (*Hey There, Earth Dweller!*) that he's not afraid of tackling difficult topics, explains the origin of all kinds of things in clear language, whether he's talking about the universe or the first pets. The funny illustrations by Eliane Gerrits perfectly compliment the book's playful atmosphere.

Hardcover, full-colour illustrations | 23 x 23 cm | 92 pages | Ages 8 and up | € 14.99
